Course Sections and Average Enrollments

Fall 2010 - Spring 2015

This report provides five year longitudinal trends of the number of class sections offered and the average class size (enrollment). This information is formatted to facilitate easy comparison of like- semesters (e.g., fall-to-fall), recognizing that student demand for specific classes may differ between fall, spring, and summer terms.

The information found here may be of particular value in supporting departmental planning and decision making as they relate to FTEF allocation and new faculty position requests, however it may also be of more general use in supporting ARC's Program Review and Education Master Planning processes. Campus location, area, and discipline levels of detail are also provided.

Particularly with regard to assessing the health of the department, note that an increase in the number of class sections offered accompanied by consistent or increasing average class sizes is considered healthy and sustainable growth. Conversely, an increase in the number of sections offered accompanied by declining average enrollment may result in decreased productivity.
